

We conducted *In-vivo*, *in-vitro* and dermatological tests with the new invisible zinc in certified laboratories in Italy, Poland and Bulgaria.

In-vivo tests with volunteers in a controlled laboratory environment proved that the new sunscreen lotions with fully natural ingredients and invisible zinc have a high UVA & UVB protection!

The dermatological test conducted on 20 volunteers (11 of them with a history of allergic reactions) showed that the new mineral sunscreen lotions are gentle to the skin, they do not irritate, do not cause redness or any allergic reactions.
